

- Project Title:
Teras Statistik — Activity Management System
- Project Type:
Web-Based Information System
- Background:
Teras Statistik is a Laravel-based platform designed to manage and document institutional activities in Kabupaten Kuningan. The system supports centralized activity management, documentation, role-based access, attachment uploads, and account approval workflows.
- Tools:
Laravel, MySQL, Blade, HTML, CSS, JavaScript
- Main Features:
 - Dashboard monitoring
 - Activity management
 - File attachment upload
 - User role management
 - Account approval system
 - Activity documentation
- User Roles:
 - Admin
 - Internal Team
 - POD Team
 - Desa Team
 - Public Viewer

manage user / account approval:

- Key Value:

The system helps improve activity documentation and monitoring by making institutional activity records more structured, centralized, and easier to manage.
- Challenges:
 - Designing role-based access
 - Managing file uploads
 - Creating approval flow for new users
 - Building a responsive dashboard interface
